

Using Carbohydrate Ratios

Carbohydrate Ratio (CR):

- A method of calculating the amount of insulin (in units) needed to cover the carbohydrate (in grams) contained in a meal or other form of nutrition.
- The insulin needed is expressed as the ratio of units insulin to grams of carbohydrate e.g. Carbohydrate ratio 1:10 = 1 gram of insulin is administered for every 10 grams of carbohydrate eaten.
- Type of Insulin: rapid-acting analogue or regular
- Carbohydrate: subtract out dietary fiber from the total amount of carbohydrate

Carbohydrate Ratio = 18 gm/unit

Carbohydrate (grams)			Insulin (units)
18	-	35	1
36	-	53	2
54	-	71	3
72	-	89	4
90	-	107	5
108	-	125	6
126	-	143	7
